ABSTRACT

5

The invention relates to a window decoration/sun protection such as a horizontal slatted blind, a vertical slatted blind, a roller blind, and a pleated blind. When brought into a condition ready for use, the window decoration comprises a first face extending in horizontal direction over at least substantially the full width of the window decoration.

- 10 When brought into the condition ready for use, the window decoration further comprises a second face extending in horizontal direction of the window decoration. The first face transmits at least substantially no light. The second face subdues the incident light in such a manner that a person present at his workplace in an inner space provided with the window decoration can still look outside through the second face, the first face being
- 15 located above the second face.
